

Is **pain** putting you off your game?

Study to assess treatment of tendon problems using local anaesthetic and injections of patients' own blood

**Are you between
18 and 90 years?**

**Have you got
tendon pain in
your Achilles heel
or knee?**

If you answer 'yes' to both these questions, you may be suitable to take part in a **study** comparing two different therapies for people with **tendinopathy** in their **Achilles heel** or **knee**. Every person who takes part in the study will receive pain treatment (anaesthetic) and at some point, may also receive the study therapy.

People of all ages and occupations can get tendon problems. For an informal conversation and to find out more about what this study involves, please contact: Dr Georgina Allen at St Luke's Hospital, Latimer Road, Headington OX3 7PF. Her number is: 01865 742949.
