Dear Colleagues

I have great pleasure in inviting you to this educational seminar at The Manor Hospital, Oxford. These are common clinical scenarios and conditions where a number of recent developments have been made in management strategy. The aim of this seminar is to provide the audience with information that is not only up to date, but also of practical value in one's daily work. Although the format is as a series of talks, the aim is to encourage audience interaction throughout the afternoon, and participants are welcome to bring along short cases of their own that they may wish to discuss in the open discussion sections. I hope you are able to attend and look forward to meeting you on September 3rd 2008.

Kim Rajappan.
